What Is Scalar Energy?

There is a basic law of physics in relation to energy that most people aren't familiar with but it's important to mention it here and it is this: Energy cannot be created or destroyed, it can only be converted from one form to another. This is known as the Law of Conservation of Energy and it's critical that you understand this law about how energy works because it forms the basis of all scalar energy tools and especially how a scalar energy pendant functions.

Now don't worry this isn't going to be a big lesson in physics because, to be honest, I hated physics in school - it was too "dry" for me but as I grew older I saw and began to understand that a basic understanding of how physics works would help me better understand the world around me and in turn my body and my health.

Before our universe existed there was nothing - just a vast expanse without form or shape. Just a huge big expanse of nothing and then suddenly all of this "nothing" condensed into a super dense and super hot mass called a quantum singularity. Once this mass became dense enough and hot enough it eventually exploded in what we call the "Big Bang" and our universe was born and we were given light.

Scalar energy comes from this infinite energy that the universe is made from but it's not something that's easily visible and it has only received serious scientific study in the last decade or so. Put simply scalar energy is the energy that exists in the spaces between everything else, in the vacuum of space and forms the fabric of our universe as we know it. You might have heard of scalar energy by another name - zero point energy and any Arthur C. Clarke or science fiction fans will be familiar with the idea of zero point energy; it's constantly mentioned in science fiction novels.

Why is scalar energy important? Because it's infinite so there's simply no end to the supply of energy we could tap into. In fact being able to harness even some of the scalar energy that surrounds us would provide every person on planet Earth with enough free energy to sustain them for the rest of their lives and there would be no pollution as a result.

It's worth remembering that the big oil and gas companies can't generate profits from scalar energy so they're not going to put very much money into researching it, which is the main reason why you haven't heard about it until now most likely.

So what does all this have to do with a scalar energy pendant?

What Does A Scalar Energy Pendant Do?

Your body is made up of a form of compressed energy vibrating at a different rate to say the energy you see produced by electricity but you're basically made of the same "stuff." You see because everything you see around you was caused by the explosion of all that energy in the "Big Bang" it means that everything you can see, hear, touch or smell is made up of energy and that includes you too. Now don't worry this energy is all put together nice and safely and you're not going to electrocute yourself by accident anytime soon - that's not how it works at all. But it's important to know that your body is a very complex piece of electrical machinery and every muscle and thought in your body is driven by something called a synaptic response, which is caused by a tiny electrical pulse. Yes just like all that stuff they said in the movie The Matrix - it's all pretty much true.

When you look at the cells that make up your body they contain something called free radicals and these free radicals carry a positive charge in them. Now most people give free radicals a hard time because they see them as being nothing but harmful because they can attack and destroy cells. The truth is that free radicals can and do attack and destroy cells but that's because those cells were damaged in some way and needed to be replaced with fresh cells and in the same way free radicals also attack and destroy bacteria that try to enter your body.

So what's the beef with free radicals then? Can't we just get along with these positively charged parts of our bodies?

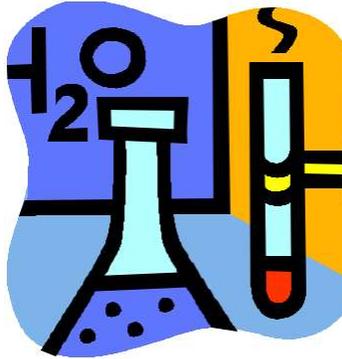

Where the problem lies is when your body has too many free radicals that go unchecked through your body and do actually wind up attacking healthy cells and in turn causing you to experience a variety of health problems.

But free radicals aren't the only source of positively charged ions in the world around you and in fact anything that uses electricity gives off positive ions that can be transmitted to your body via Electromagnetic Fields (EMF). Having this many positively charged ions in your body increases the damage to your cells and can lead to health problems from chronic fatigue, to migraines and even life threatening problems like cancer.

A scalar energy pendant is charged with all the negative ions you need to restore the energy balance inside your body. You see supplying your body with all the negative ions provided by a scalar energy pendant you're cancelling out all the positive ions roaming around your body and causing you damage. The scalar energy pendant allows you to personally tap into and ground yourself with all the negative ions you need to fight off disease, slow down aging and just generally improve your health.

Our scalar energy pendants are your own personal gateway to the infinite energy of the universe.

How Are Scalar Energy Pendants Made?

Now that you understand why scalar energy pendants are so important to your health you're probably wondering exactly what these pendants are made from that make them so special? The secret "ingredient" in OUR pendants is actually volcanic rock. This type of pendants was first produced in Japan and that's why you see "Japanese Technology" on the pendant boxes. That is also who we will focus briefly on notable health advantages that are enjoyed by the Japanese people.

Please note that our pendants and other products no longer contain lava rock from Japan.

How has lava rock improved the health of the Japanese? Well you might have noticed that Japanese people tend to have longer lifespans than most other people on our planet. The United Nations and the WHO (World Health Organization) have determined that the Japanese people have the second longest life expectancy of any people (just after Hong Kong (as of 2021). This is in contrast to Canada, the United States and the UK which have lower life expectancy.

Many people attribute the long lifespan of the Japanese to the quality of the food they eat based on the soil it grows in. The deep earth lava rock minerals in the soil have a direct positive effect upon the soil and the crops grown in it. This is because Japanese volcanic rock is dense in essential mineral concentrations that result in high levels of negative ionic energy.

Volcanic rock has long been recognized in Japan as a source of beneficial energy and for thousands of years Japanese people have said that certain types of volcanic rock can improve mental focus, shorten the amount of time you need to recover from exercise, help with headaches and migraines and are even able to boost your immune system too. So it comes as no surprise that making a pendant out of this lava rock would be of great benefit.

Volcanic rock is created by lava flows after an eruption and lava carries some of the rarest elements on earth back to the surface of our planet from inside the heart of our world. As a result our pendants contain over 70 naturally occurring minerals that are found in dense concentrations in this type of rock.

The manufacturing process for the pendants involves exposing the volcanic rock to extreme levels of heat to allow the materials involved to bond at a molecular level and form what is called a “bio-ceramic”. And it's this molecular bond that allows these pendants to give off such high levels of negative ions on a consistent basis.

What Will Your Scalar Energy Pendant Do For You?

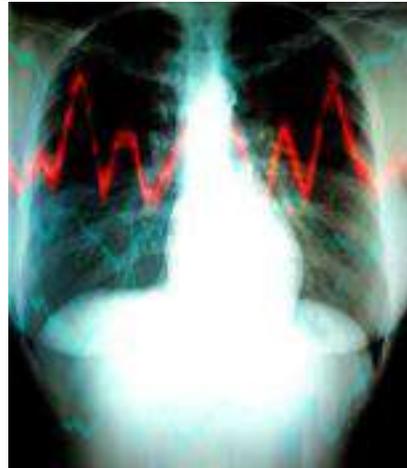

Because these pendants harness the same energy that was used to create the entire universe you would imagine that they would have some pretty impressive health benefits - and you'd be right too. The pollution that we've managed to create on this planet through the Industrial Revolution has begun to poison both us and planet Earth in a little over 150 years of "modern industry". If we just stop to take a few moments and look at all the pollution in the air from combustion engines and power plants and all the junk (called particulate matter) that's floating around us and being inhaled by us every single day it's no surprise that the world has a plague of health problems right now.

The by-products of combustion engines and fossil fuelled power plants are responsible for the oxidative damage that causes an inflammation in the lungs of adults and children. Because the body is under "attack" it produces more free radicals which are created in addition to the normal levels of free radicals in your body and then you have a positive ionic charge in your body, which as we know isn't good for you. It's not just an irritation of your lungs that you need to worry about because these pollutants can affect your children and in heavily polluted areas children with noticeably stunted growth are becoming more and more common.

So when it comes to dealing with airborne pollution that causes your body to produce too many free radicals and positive ions your scalar energy pendant can eliminate the harmful effects of these positive ions by charging your body with all the negative ions it needs.

Does the idea of scalar energy and positive and negative ions still seem a bit hokey to you?

That's ok because when I first heard about them I was a tiny bit reluctant too - I'm naturally a skeptic until I see proof. Look at it this way - have you ever noticed that people and pets can be more irritable, restless or just plain old unwell during bad weather or a storm?

Now the weird thing is that when you have a major cold front or low pressure weather system approaching the entire atmosphere is heavily charged with positive ions and you'll see people complaining about everything from back pain to migraines to old injuries becoming inflamed. Is this a coincidence or is it directly related to the positive ionic charge in the atmosphere?

There's a favorite quote from a movie called "V for Vendetta" where the hero says, "God doesn't believe in rolling dice nor does he believe in coincidences"

which he actually kinda robbed from Einstein because he didn't believe in coincidences either - things happen for a reason.

Studies have shown that during these types of weather changes and weather patterns people will be more irritable, suffer from thyroid problems and also generally suffer from lethargy or even chronic exhaustion. In the same studies equipment that emits negative ions has been shown to counteract all of these health problems almost immediately.

This isn't just some wacky alternative medical theory - this stuff is based on hard scientific fact.

So what other health benefits can the negative ions produced by a scalar energy pendant have?

Sleep related benefits

The Centre for Sports and Exercise Sciences, Liverpool England conducted a study on the potential benefits of negative ions on athletes and students. They made many observations during the study but the ones that's really stuck out were the fact that not only do negative ions help improve your recovery time after heavy exercise but they also help you sleep more soundly. They do this by balancing something called your circadian rhythm which is your sleeping pattern in any 24-hour period.

There have been numerous other claims that negative ion emitters can help people with any number of different sleeping problems sleep more soundly each night. And as we saw earlier that because your scalar energy pendant can help with respiratory problems caused by particulate pollution in the air they might also be able to help with sleep disorders such as sleep apnea.

Cardiovascular benefits

Having a healthy balance of negative ions in your body can help with a wide range of cardiovascular problems because they help to dilate blood vessels which reduces the risk of heart attacks and strokes. Studies have also shown that negative ions help stabilize blood pressure which is ideal for anyone with an existing heart problem and they also help to decrease your pulse rate.

One of the mechanisms for achieving this is because negative ions stop your lungs becoming damaged by pollutants in the air which could lead to your lungs producing chemicals that could harm heart function and increase your blood pressure to dangerous levels. Negative ions have also been shown to make your blood less viscous or thick so they further reduce the risk of clots or blockages that way too.

Asthma and other respiratory problems

There is a direct connection between cold fronts and low pressure weather systems and increased asthma attacks in any area with low pressure weather systems and this connection was first noticed in Calgary, Canada. These types of weather systems carry a very large positive ionic charge and in turn this can cause a variety of respiratory problems including hay fever, emphysema and bronchitis.

Studies conducted in the University of Pennsylvania's Graduate Hospital, and the Frankford Hospital in Philadelphia found that over 60% of patients suffering from hay fever or bronchial asthma have experienced either partial or total relief because of therapy that used negative ions to treat their problem. So hospital studies can also back up the fact that negative ions are helpful in treating respiratory problems!

Are you a believer in scalar energy pendants yet?

If not then keep reading because you will be very soon.

General health benefits

Negative ions and in turn a scalar energy pendant are just good for your overall health when it comes down to it. Having acidic blood is one of the single worst health problems you can have and oddly enough a scalar energy pendant can increase the levels of calcium and sodium in your blood giving your blood a more alkaline pH balance to it.

Or if you're struggling with a weak immune system or some type of auto-immune dysfunction then negative ions from a scalar energy pendant increase the production of globulin (a serum protein) which helps improve your immune system and, in turn, your ability to fight disease.

Negative ions have also been shown to be of benefit in treating people with depression by helping to increase serotonin levels in the brain and a study by the Russian Academy of Sciences demonstrated clinical evidence that negative ions helped to reduce stress in both humans and animals.

Viral infection protection

A feature in the Journal of Applied Microbiology, dated 1987, showed that negative ions were capable of reducing the presence of airborne viruses by up to 40% and that there were no harmful side-effects as can be experienced by people or animals taking powerful antibiotics for example.

A scalar energy pendant will help you correct the ionic imbalance in your body so that your body can repair itself and you can live in harmony with the energy of the world and the universe around you. To get the maximum possible benefit from a scalar energy pendant it needs to be worn next to your skin. If you're using a

scalar energy pendant to heal a pet or help with their overall health make sure the pendant is worn close to their skin and if not there then on their collar instead.

Your Health and Electromagnetic Fields

The world around you is filled with electronic and electrical devices of all kinds from the cell phone you carry around in your pocket to the computer you use at work and the microwave you use at home to heat your meals. Then you have

microwave transmitters, radar dishes and all kinds of other equipment which create and emit electromagnetic fields (EMF) and these particular waves are charged full of positive ions. This is worth repeating - anything in your home that uses electricity is capable of generating an Electromagnetic Field which charges both you and your body with the positive ions you don't need - the types of positive ions that result in a

surplus of free radicals and damage to your body at a cellular level.

But don't Electromagnetic Fields occur in nature too? That's absolutely true and without EMF we wouldn't have our north and south poles and the human body emits its very own EMF too. But the EMF we're talking about here don't occur naturally and aren't part of the natural cycle of life on this planet.

If you look at most modern workplaces they're multistory buildings crammed full of computers, scanners, fax machines, photocopiers, projectors and lots of other electronic equipment. So this means you're spending most of your day surrounded by a dense field of positive ions created by EMF that are bombarding you from the moment you walk into work till the moment you leave.

And of course the first thing most people do when they leave work on their drive or commute home is to use the cell phone to text or call their friends. When you use a cell phone it literally makes all the negative ions drop out of your body at once. Have you ever noticed that you feel exhausted after talking on a cell phone for any length of time or the amount of heat it generates on your face? The reason this happens is because you're basically holding a small, portable microwave oven to your face - it emits the same type of energy. No sane person would do that right?

Then when you get home you turn on your TV, digital radio and your laptop or tablet computer and maybe make yourself a quick microwave meal because you haven't got time to cook yourself a proper meal. You've just taken another bath in positive ions.

To finish off your long day you drag your laptop or tablet to bed with you, set your alarm on your cell phone and stick it under your pillow so it'll definitely wake you. So you're going to sleep each night with a source of positive ions sitting on your crotch and a portable microwave as a pillow....that just can't be healthy folks. It

would actually be funny if it wasn't true but this is exactly how most people work, eat and sleep each day. Year in and year out.

Don't you think it's a little bit of a massive coincidence that the industrialization and modernization of our world has led to a whole new range of health problems appearing and ones that had never been seen before in history? Your human body is a very highly tuned machine that is designed to work in harmony with the world around it so when you introduce all these artificial energy sources and toxins into your life you're going to cause yourself health problems.

This isn't just some form of "imaginary" science either because I'm sure anyone reading this has heard of the cancer clusters that exist in towns that are either built under high voltage power lines or are near radar stations. The reason this happens is that both power lines and radar stations emit massive amounts of EMF radiation that your body simply isn't able to fight off because it lacks the negative ions it needs to keep your ionic energy in balance.

So when you look at your home or office you'll notice that you're surrounded by sources of EMF at a level that has been never been seen before in human history. And you wonder why you feel ill when you're stuck in that cubicle in work all day or why when you get home all you have the energy for is to microwave some dinner and sit in front of the tube all night? Your body is literally being drained of the natural energy, of all the negative ions, that make you feel energetic and healthy. In short your home and where you work are energy parasites which are, most probably, having a very serious and very negative effect on your health.

Is there any way to stop yourself being bombarded with all of these positive ions? Well you could throw out or avoid every single piece of electrical equipment that you own and live in a forest but for most people that simply isn't going to be an option (tempting as it is to get off the grid completely). Using a scalar energy pendant is an ideal way to give your body the negative ionic charge that it needs every single moment of the day. The negative ion charge in these pendants is so strong that it completely counteracts all the positive ions you receive from computer equipment or cell phones for example.

Grounding or Earthing Yourself

If you look at the exhibits in almost any natural history museum you'll see that for a very long time our ancestors walked everywhere in their bare feet. Even when they first developed "shoes" they were organic in nature because they were made from animal's skins and hide. In fact some people still prefer walking around in their bare feet as much as they can - they feel somehow better "connected" to the earth this way and the crazy thing is that these same people who like to walk around barefoot are more right about feeling grounded than they could ever imagine.

We already know that our planet Earth produces energy in the form of an Electromagnetic Field but it also produces and radiates other forms of energy too. You see as our tiny little planet hurtles through space we're subjected to something called the solar wind which is a stream of charged particles being blasted towards us by our sun. You can see evidence of these charged particles that soak our planet whenever you see the aurora borealis or the Northern Lights; this spectacular lightshow of nature is simply highly charged particles from the sun interacting with our atmosphere and producing the type of effects that Industrial Light and Magic (the Star Wars guys) would be proud of.

The thing is that our ionosphere receives a lot of energy from the solar wind and when it reaches a certain level it has to discharge this energy into the earth, which it does in form of lightning. When lightning strikes the surface of our planet it charges it with massive amounts of negative electrons that have been gathered by our atmosphere from the solar wind. Electrons themselves are their own special type of particle and without worrying too much about the physics of particles all you need to know is that negatively charged electrons are good for your body.

So these negative electrons flow from the earth, through your feet and up into your body. Well they will as long as your body is grounded or connected to the earth but because the vast majority of people wear shoes made from synthetic materials you're preventing your body from grounding itself and receiving the all the health benefits that negative electrons have to offer you.

Grounding or earthing your body is something which has been receiving a lot of scientific attention for the last few decades and more and more doctors and health specialists are starting to speak out about the amazing effects that simply grounding yourself with the earth can have.

Why do you think you always feel better when you're walking around barefoot in a park or at a beach? Sure you're away from most, if not all, the stresses and strains of your life but you're also connected to the earth and receiving a constant

flow of negative electrons from it. Have you also noticed that you don't need to stay at the beach or park for hours to feel better and that after about 15-minutes you've managed to reach a state of proper relaxation and calm?

Oddly enough this is roughly the same amount of time that it takes for your body to recharge itself with negative electrons from the earth. Coincidence perhaps? Or perhaps not?

But why does it have to be your feet that ground you? Why can't you just bend down and touch the earth with your hands instead? Or just lay flat on the ground and charge your entire body at once?

You see the ball of your foot is one of the key acupuncture points on the body and is referred to as "kidney 1/KD1" by acupuncturists and reflexologists and the Chinese word for this is Yong Quan which translates to, oddly enough, "Gushing Spring". You'll notice that many Eastern traditions involve exercises where you stand on the balls of your feet or KD1 and this is based on the fact that your KD1 or Yong Quan point is connected to all the other energy meridians or channels in your body, so it's the ideal point on your body to ground with. Any negative electrons that flow into your body through this point have free access to the rest of your body.

The Health Benefits Of Grounding

All of those negative electrons flowing up from the earth are an extremely powerful antioxidant in the same way that negatively charged ions are. Your body is actually designed to be grounded by design because there's a type of "gel" in your skin tissue called "ground substance" that actually stores any negative electrons that you gather while you're walking around in your bare feet. If we didn't need to store negative electrons then this grounding "gel" wouldn't exist in our body.

Numerous clinical studies have shown that stress literally drains out of your body when you're grounded. Your heart rhythm changes and your breathing pattern changes. People with inflammation of the joints and other health problems related to inflammation have also noticed that being grounded gives them almost instant relief from these problems.

And it's not just effective when you're actually grounded - you can receive the benefits of grounding later on in the day when you're trying to sleep. Grounding helps reduce the levels of cortisol in your body which is a stress hormone. Elevated levels of cortisol also means that you'll have trouble sleeping at night so anyone suffering from sleeping disorders or insomnia can also benefit from being grounded too.

Grounding can help you with everything from chronic fatigue to circulatory problems because it prevents your blood from becoming too viscous so that it flows more freely which can help prevent everything from heart attacks to strokes.

If you have an existing wound or injury grounding can help speed up healing time, your circadian rhythm can be improved, it reduces stress and anxiety, it helps boost your immune system and can even help improve your digestion and this isn't a complete list of benefits by any means.

It's going to be very difficult to achieve and maintain a consistent state of health in your life unless you're receiving a flow of negative electrons from the earth. Imagine being able to feel as calm and relaxed as you do at the beach but having that feeling available to you every single day of your life whenever you choose to have it? How absolutely incredible would that feeling be?

The Best Places for Grounding

Of all the places that you can ground or earth yourself the very best of these has to be a beach or near a lake. Walking in fresh wet sand near moving water means you are being exposed to a huge amount of negative electrons which can have you feeling better in just minutes. If you're not living near a lake or the ocean then standing or walking on fresh grass that's still wet with the dew of the morning is an excellent way to receive a charge of negative electrons.

The most important part of being grounded is removing all artificial or synthetic barriers between you and the ground. This means no shoes or sandals and you also need to avoid covered floors and wooden floors too. Synthetic materials and other floor coverings such as wood are poor conductors of energy as is asphalt so you'll need to avoid all of these when you want to earth yourself. Your bare feet need to be in contact with the earth and without any barriers between you and "her".

If you're living in a high-rise apartment block or just several stories off the ground then you might find it difficult to get downstairs to ground yourself when you need to. The good news is that you can get a grounding sheet that you can stand or sleep on that helps you ground yourself for a negative electron boost. These grounding sheets have silver wire in them which help conduct the negative electrons into your body and the more modern types of grounding sheets even allow you to use your electrical socket to help ground yourself. You can also help ground yourself by charging your body with all the negative ionic energy it needs by using a scalar energy pendant, which you can carry around with you all day and nobody will be any the wiser you're wearing one

One small health tip on grounding yourself is that it's going to be pointless trying to sleep on a grounding sheet if you're sleeping in a room surrounded by electrical equipment like a television, DVD player, laptop, iPad or other similar electrical devices. Your bedroom should have absolutely nothing inside it that can generate an EMF and if that means using an old type of wind-up mechanical alarm clock then so be it.

Is There Any Scientific Proof?

Like most people reading this you'll want at least some scientific proof that negative ions actually do have health benefits and we're happy to spoil you with a whole variety of sources and studies that you can use to read up on the level of research that has been done in this field.

The notion that negative ions are beneficial to your health and in treating a huge number of medical conditions isn't new by any stretch of the imagination nor is it restricted to the Western world or Eastern mysticism or tradition either.

Studies into the health benefits of negative ionic energy dates back to the 1950s and these same studies have been conducted in the United States, Europe and Russia by accredited and trusted scientific and medical professionals.

These studies have shown that negative ions and negative ion generators are beneficial in:

- § Treating respiratory problems
- § The treatment of depression
- § Improving general mood
- § Burns treatment and healing
- § Killing airborne viruses
- § Helping with insomnia
- § Reducing cortisol levels
- § Treating certain types of cancer
- § Reducing recovery time after physical exercise
- § Improving mental focus and overall concentration

For your benefit and reading pleasure we've included a list of these resources just below here - there's as much scientific proof there as anyone could need.

Testing The Intangible

Now I can hear some people say "...but you're testing something that's invisible....how can we know that negative ions exist or that a scalar energy pendant can work?"

In the interests of pure, verifiable science I decided to test this exact "problem" with a piece of equipment called a negative ion tester. In test after test I have been able to prove that these scalar energy pendants give off 4,000+ negative ions every single time they're tested. The only other source of natural negative ionic energy that comes close to this is an actual waterfall, which might explain the Japanese purification ritual of misogi where Samurai and martial artists would meditate in the cold, flowing water of a waterfall.

Any of these genuine scalar energy pendants can be independently tested to prove that they do emit several thousand negative ions every single time. In addition to which they will continue to emit negative ions for well over a lifetime. So you don't have to worry about them running out of energy anytime soon, I guarantee your pendant will emit energy for life.

Conclusion

You have absolutely nothing to lose and everything to gain by investing in a scalar energy pendant today. These pendants are scientifically proven to improve your health and help counteract all the harmful effects of Electromagnetic Fields and the flood of positive ions that your body has to endure every single day.

If somebody told you that you could improve your overall quality of life, have more energy, have a stronger immune system, sleep better and just generally feel great in your own skin and it would only cost you \$50 what would you do?

Because that's the exact offer we're providing to you. You can own your own natural negative ion generating pendant that will provide you negative ions wherever you go for the rest of your life!

Visit <https://QuantumPendants.org/> and take advantage of our scalar energy pendant special offers.
